TVU Remote Commentator

Advantages

- △ **Huge cost savings - no travel, no special equipment and no master control room needed**
- △ **Synchronized, broadcast quality audio delivered in real time**
- △ **Scalable across any geographical location**
- △ **Cloud based intuitive solution gets you started in minutes**
- △ **Localized real time commentary to engage fans from around the world**

Synchronized Real Time Commentary from Any Location Over Public Internet.

Deliver perfectly synced, highest quality audio commentary from anywhere to a worldwide audience at a fraction of the cost. Even add voice overs to recorded content.

Features

File based Workflow

Easily add commentary for any live events even when the event and commentators are in different parts of the world. The file based workflow also helps you upload files (MOV and MP4) to add voice overs for recorded content.

Schedule Service

Effortlessly create events with predetermined start and end time, VFB source and channel output selection.

Group Creation

Create groups based on language and generate independent links for each group. Participants on same group can communicate (audio/video) with each other.

Talkback (Push to Talk)

Designed specifically for event and sport commentators, TVU Remote Commentator has a push to talk functionality that allows independent audio control for communication and LIVE commentary.

Coordinator Room

Monitor video and audio feeds, talk to each commentary group individually or to all groups at once, switch between the main and backup sources and edit the event while it is live.

Backup Source

Set up an optional backup source for every event and switch from the main input to the backup with one click if needed.

VFB from Receiver via SDI or IP

Simply select any feed from TVU Receivers and integrate with your broadcast facility. Use any feed from a TVU receiver's SDI input, multiple IP protocols, external sources, TVU Transceivers or TVU Grid, with up to 4 audio pairs per input source.

Audio Mixer

Get extraordinary audio with web based audio mixer for level control, audio channel mapping on SDI OUT, recording, and mute/unmute. The Advanced Audio Mixer supports up to 4 output pairs (up to 8 output channels), each with its own audio panel.

No Special Equipment

Simple integration with TVU Anywhere and PC browser (Google Chrome), requires no special equipment.

Cloud Based

Sessions are created and managed on the cloud which eliminates the need for expensive hardware or software. An on-premises mode using a TVU Transceiver is also available.

Flexible Inputs and Outputs

Use the TVU Producer program or a Producer slot, a TVU Pack, TVU Grid, an external IP source or uploaded files as the event input, and send the output with the commentators' audio to a TVU receiver or an IP destination.

Co-hosts and Cloud Record

Add up to three online co-hosts per event. Cloud Record automatically records the program output and every input source, ready to download with the commentators' audio.
