Wirelessly Transfer Content from Anywhere to Bitcentral's Oasis MAM Solution

Bit Central Server

- Quickly send any files from a laptop in the field to a Bitcentral server back in the studio
- Utilize TVU's multiple IP connections simultaneously for a seamless file transfer
- Files are uniquely categorized and stored in the TVU Receiver and automatically transferred to Bitcentral's Oasis platform

With Bitcentral integration, any TVU transmitter can facilitate a smooth and fast file transfer from a laptop in field to Bitcentral's Oasis platform. By connecting to the TVU transmitter's hotspot, a WiFi enabled laptop can transfer files back to the studio using TVU's Auto Sync feature. TVU's Auto Sync feature aggregates multiple IP connections simultaneously within the TVU transmitter to quickly and easily transfer files to and from a TVU Receiver back in the studio.

Once the file has been uploaded to the TVU Receiver, the content is then automatically uploaded to the local Bitcentral server and ingested into Oasis. Each file is specifically identified as TVU content so that it is easy to search for simultaneously within Oasis. With TVU's Bitcentral integration, it is now faster and easier than ever to send files from a laptop in the field to Bitcentral's Oasis.
