

TVU Booking Service

An Integrated Booking and Scheduling Solution

TVU Booking Service is a simple scheduling solution designed to help broadcasters better manage multiple streams within their IP video workflow. Working within the award-winning TVU Grid ecosystem, the TVU Booking Service delivers a simple-to-use integrated management system that allows stations to manage and control transmissions for both TVU One and TVU Grid across all units. Using a simple Web-based interface, the TVU Booking System delivers simplified user management from any location, an easy booking workflow and easy configuration.

With this service, it is easy to schedule a time to have a particular IP source go live with a specific transceiver. By booking live broadcasts in advance, there is no need to monitor the live status of TVU One sources or switch between live feeds. TVU Booking Service will take scheduled TVU sources live automatically as well as switch between live sources without requiring the operator in the studio to click a single button. With the full schedule also available on the transceiver interface, it is now simpler than ever to plan and book upcoming live shots.
