

TVU Remote Commentator

Advantages

- △ Huge cost savings - no travel, no special equipment and no master control room needed
- △ Synchronized, broadcast quality audio delivered in real time
- △ Scalable across any geographical location
- △ Cloud based intuitive solution gets you started in minutes
- △ Localized real time commentary to engage fans from around the world

Synchronized Real Time Commentary from Any Location Over Public Internet.

Deliver perfectly synced, highest quality audio commentary from anywhere to a world wide audience at a fraction of the cost. Even add voice overs to recorded content.

Features

File based Workflow

Easily add commentary for any live events even when the event and commentators are on different parts of the world. The file based workflow also helps you upload files to add voice overs for recorded content.

Schedule Service

Effortlessly create events with predetermined start and end time, VFB source and channel output selection.

Group Creation

Create groups based on language and generate independent links for each group. Participants on same group can communicate (audio/video) with each other.

Push to Talk

Designed specifically for event and sport commentators, TVU Remote Commentator has a push to talk functionality that allows independent audio control for communication and LIVE commentary.

VFB from Receiver via SDI or IP

Simply select any feed from TVU Receivers and integrate with your broadcast facility.

Audio Mixer

Get extraordinary audio with web based audio mixer for level control, audio channel mapping on SDI OUT, recording, and mute/unmute.

No Special Equipment

Simple integration with TVU Anywhere and PC browser (Google Chrome), requires no special equipment.

Cloud Based

Sessions are created and managed on the cloud which eliminates the need for expensive hardware or software.
